About Project

Description:

This project resembles a social cataloging website that stores a collection of book details including title, author, name, ISBN 13, year of publishing, number of pages of the paperback version and book reviews. It has an affiliated stationary store managed by the admins which offers items that help enrich the reader's experience and encourage them to read more, such as book-inspired bookmarks, kindle night readers and note taking gadgets.

Aim:

The target is to provide the users with a complete database of book selections they navigate and explore, as well as make contributions with the books that they might find missing. Their submissions are then reviewed by the admins before being published to the website. To help the admins, users can volunteer for reviewing submissions and managing the site interactions.

Inspiration:

1. The main inspiration of this project is Goodreads website, the book-centric book reviewing site which was later purchased by Amazon. (visit: https://www.goodreads.com)
2. The Design theme was heavily inspired by Natalya Demidova's Cosmetics project on Behance (visit: shorturl.at/DJLS8)
